1. Professional Summary

Experienced makeup, special-effects, and skincare professional with more than 10 years in the beauty and aesthetics field. Has personally observed and provided cosmetic and skin-care services to over 500 clients following injectable lip and facial procedures, gaining extensive knowledge of filler-related bruising, swelling, and tissue changes within the first 48 hours post-treatment.

Combines broad cosmetic-industry experience with advanced special-effects (SFX) training, including the creation and analysis of simulated trauma. This unique background enables accurate differentiation between cosmetic enhancements, procedure-related effects, and blunt-force injuries in photographs or live subjects.

Qualified under California Evidence Code § 720 through specialized knowledge, professional training, and extensive experience.

2. Education and Training

- Ruby Make-Up Academy — Professional High-Fashion Beauty Program (Certification Granted May 8, 2018)
- Dream Body & Beauty Institute — Stretch Mark and Scar Treatment Training (Certificate of Completion, February 6, 2023)
- Bella Spa Academy — Hyaluron Pen Procedure Certification (February 6, 2021)
- Ruby Make-Up Academy — Professional Microblading Certification (August 4, 2020)
- Bella Spa Academy — Eyebrow Lamination Master Class (August 4, 2020)

3. Professional Experience

Lead Artist & Skin Consultant — Melanie Khoury Studio, Arcadia, CA (2017 – Present)
• Provides post-injection skincare consultations and camouflage guidance.
• Observed and documented healing progression of post-injection bruising and swelling in 500+ patients.

• Advises clients and clinicians on cosmetic camouflage techniques for procedural bruising and color correction.

Freelance Special-Effects Makeup Artist (2016 – Present)
• Designs and applies simulated injury, bruising, and trauma effects for film, television, and photography.
• Expert in color theory, texture replication, and lighting analysis to accurately mimic real-world skin reactions.
• Provides technical consultation for production teams on realistic injury simulation and continuity accuracy.

4. Expertise Relevant to Legal Proceedings

- Differentiation of cosmetic procedural bruising/swelling from traumatic injury.
- Photographic analysis for coloration, shadowing, and textural patterns.
- Interpretation of typical post-injection appearance and healing timelines.
- Identification of surface characteristics inconsistent with subdermal or blunt-force trauma.
- Clear, layperson-friendly testimony and reporting for visual evidence review.

5. Awards and Recognition

• First Place – Fantasy Make-Up Competition, Ruby Make-Up Academy

6. Professional Affiliations

- Member, California Makeup & Skincare Professionals Association (CMSPA)
- Participant, International Beauty & SFX Trade Show
- Member, Society of Cosmetic Practitioners and Aesthetic Specialists

7. Availability for Legal Consultation

Available for written declarations, photographic and visual analysis, and live expert testimony regarding the visual differentiation between cosmetic procedural effects and traumatic injuries to facial tissue.

DECLARATION OF MELANIE KHOURY SAWAYA

Expert Analysis and General Educational Statement
(Cosmetics / Special Effects (SFX) / Skincare Focus)

Reviewer: Melanie Khoury Sawaya
Discipline: Makeup, Special Effects (SFX), Skincare
Business Location: Sierra Madre, California
Date(s) of Review: January 18, 2022 and November 4, 2023

Scope and Limitations
• This declaration is based solely on my professional background in makeup, special-effects (SFX), and skincare artistry.
• I am not a medical professional and am not offering medical opinions, diagnoses, or legal conclusions.
• My analysis and statements are based on visible surface characteristics observed in photographs and on my experience with cosmetic and SFX applications and post-procedure appearances.
• Lighting, camera settings, and image quality can affect appearance.

I. Expert Analysis (Photo-Only; Cosmetics/SFX Focus) — January 18, 2022
Neck – Side Profile (Coloration Observed)
• Coloration appears diffuse and flat, resembling a surface wash of color rather than irregular internal mottling.
• Edges are soft and uneven, consistent with pigment that has been rubbed or feathered.
• Lighter streaks or voids within the colored area appear consistent with partial rub-off or smear.
• Skin texture (pores/follicles) remains visible through the coloration, suggesting a topical product on the surface of the skin.

Under-Eye & Cheek – Frontal View
• Under-eye coloration reads as even shading with smooth borders, rather than the irregular, multi-tone variation often seen when color develops below the skin surface.
• Reflective particles are visible under the eye and on the cheek area, consistent with cosmetic shimmer or micro-glitter.
• A surface sheen and streaking pattern is present, consistent with pigment breakdown with warmth or perspiration.
• No conspicuous surface puffiness is apparent in these photos.

Visual Consistency Checks (Non-Medical)
• Patterning: No repeated or clear shapes (e.g., hand/finger outlines) are visible.

• Color Variation: The coloration appears uniform and even across large areas.
• Edge Behavior: Edges appear feathered/blended, similar to applied pigment rather than subsurface discoloration.

Indicators Suggestive of Topical Product (Cosmetics/SFX Perspective)
• Uniformity: Smoother, more even color fields than typical subdermal color change.
• Surface Cues: Visible reflective particles and surface shine consistent with cosmetic product.
• Transfer/Breakdown: Streaking/separation patterns consistent with rub-off or sweat-related pigment movement.
• Lack of Visible Puffiness: No notable surface contour change observed in these images.

Conclusion to Section I (Observational; Cosmetics/SFX Only):
Based on the visible surface characteristics in the submitted photographs—flat, blended coloration; streaking consistent with surface pigment movement; and reflective particles typical of cosmetic products—the observed color patterns are more consistent with topical cosmetic application than with color that develops beneath the skin. This observation does not address medical causation or any legal question.

II. General Characteristics of Post-Injection (Lip Filler / Lip-Flip) Appearance — November 4, 2023
(Educational and cosmetic context only)

Immediate and Short-Term Effects (0–48 hours)
• Swelling: Mild to moderate, generally smooth and uniform along the lip border; most noticeable near injection entry points.
• Tenderness: Lips may feel firm or tight; mild numbness/tingling can occur from topical anesthetics or lidocaine-based filler.
• Color Change: Small bluish or purplish marks can appear where the needle entered—typically round/oval, well-defined, and localized.
• Shine/Gloss: Lips often appear glossy due to ointment (e.g., Arnica, Aquaphor) or mild surface tension from swelling.

Intermediate Healing (2–5 days)
• Swelling Reduction: Edema gradually subsides; lips soften.
• Bruise Evolution: Color may darken to purple-blue, then fade to green-yellow before clearing; marks generally remain localized near entry sites.
• Texture: Skin remains intact and smooth without abrasions or crusting.

Differentiating Features (Cosmetic Observation Perspective)
• Pattern: Injection-related effects are often symmetrical and follow a predictable line; trauma-related color may be irregular/asymmetric.

• Depth & Contour: Post-injection swelling tends to be evenly puffy; trauma may show uneven or indented areas.
• Color Transition: Needle-related bruising is usually small/localized; traumatic bruising may spread more diffusely.
• Surface Integrity: Overlying epidermis is typically unbroken after injection.

General Duration
• Swelling commonly peaks within 24–48 hours and resolves within 3–5 days.
• Minor bruising typically fades within 7–10 days, varying by skin tone and product used.

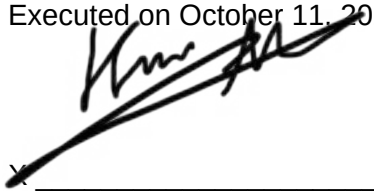

Typical After-Care
• Cold compresses for the first 24 hours.
• Avoidance of heat exposure, heavy exercise, and alcohol for 24–48 hours.
• Gentle cleansing and use of hydrating balms.

III. Exhibit Reference (Observation Only)
Based on my professional experience observing over 500 clients in the 24–48 hours following cosmetic lip injections, the overall surface appearance in Exhibit C—specifically the smooth, uniform contour along the vermillion border and localized coloration—shares general visual characteristics commonly seen shortly after lip-enhancement procedures. This statement identifies surface similarities only and does not offer any medical or causation opinion.

Final Statement
The information above is offered solely for educational and cosmetic observation purposes to assist the Court in understanding general post-procedure characteristics and cosmetic surface analysis. It is not a medical diagnosis or determination of cause, and it does not render an opinion regarding any specific individual or allegation.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed on October 11, 2025, at Sierra Madre, California.

Declaration of Melanie Khoury Sawaya (Cosmetic/Aesthetic – Lip Injection/Lip-Flip)

Curriculum Vitae of Melanie Khoury Sawaya

Exemplars & Demonstrative Reference Exhibits (D-1–D-6): Post-Injection Lip Appearance

Limited-Purpose Use: Demonstrative only to illustrate general post-injection surface characteristics (vermillion-border swelling, localized needle-entry discoloration, color evolution, symmetry, intact epidermis, ointment sheen, pigment transfer/breakdown). Not case-specific; not offered for the truth or medical diagnosis. See Evid. Code §§ 801–802.

Exemplars & Demonstrative Reference Exhibits (D-7–D-12): Makeup Application/Transfer (Surface Pigment)

Limited-Purpose Use: Demonstrative only to illustrate surface features associated with topical pigment (edge behavior, uniformity vs. mottling, reflectivity/shimmer, visible skin texture, transfer/breakdown). Not case-specific; not offered for the truth or medical diagnosis.

We will request that the Court receive the D-series exhibits as demonstratives only to aid understanding of the expert's method and observations.

If you experience any issues opening the files, let me know and I will promptly re-send. A Proof of Service by Electronic Transmission will follow.

DECLARATION OF MELANIE KHOURY SAWAYA

Expert Analysis and General Educational Statement
(Cosmetics / Special Effects (SFX) / Skincare Focus)

Reviewer: Melanie Khoury Sawaya
Discipline: Makeup, Special Effects (SFX), Skincare
Business Location: Sierra Madre, California
Date(s) of Review: January 18, 2022 and November 4, 2023

Scope and Limitations
• This declaration is based solely on my professional background in makeup, special-effects (SFX), and skincare artistry.
• I am not a medical professional and am not offering medical opinions, diagnoses, or legal conclusions.
• My analysis and statements are based on visible surface characteristics observed in photographs and on my experience with cosmetic and SFX applications and post-procedure appearances.
• Lighting, camera settings, and image quality can affect appearance.

I. Expert Analysis (Photo-Only; Cosmetics/SFX Focus) — January 18, 2022
Neck – Side Profile (Coloration Observed)
• Coloration appears diffuse and flat, resembling a surface wash of color rather than irregular internal mottling.
• Edges are soft and uneven, consistent with pigment that has been rubbed or feathered.
• Lighter streaks or voids within the colored area appear consistent with partial rub-off or smear.
• Skin texture (pores/follicles) remains visible through the coloration, suggesting a topical product on the surface of the skin.

Under-Eye & Cheek – Frontal View
• Under-eye coloration reads as even shading with smooth borders, rather than the irregular, multi-tone variation often seen when color develops below the skin surface.
• Reflective particles are visible under the eye and on the cheek area, consistent with cosmetic shimmer or micro-glitter.
• A surface sheen and streaking pattern is present, consistent with pigment breakdown with warmth or perspiration.
• No conspicuous surface puffiness is apparent in these photos.

Visual Consistency Checks (Non-Medical)
• Patterning: No repeated or clear shapes (e.g., hand/finger outlines) are visible.

• Color Variation: The coloration appears uniform and even across large areas.
• Edge Behavior: Edges appear feathered/blended, similar to applied pigment rather than subsurface discoloration.

Indicators Suggestive of Topical Product (Cosmetics/SFX Perspective)
• Uniformity: Smoother, more even color fields than typical subdermal color change.
• Surface Cues: Visible reflective particles and surface shine consistent with cosmetic product.
• Transfer/Breakdown: Streaking/separation patterns consistent with rub-off or sweat-related pigment movement.
• Lack of Visible Puffiness: No notable surface contour change observed in these images.

Conclusion to Section I (Observational; Cosmetics/SFX Only):
Based on the visible surface characteristics in the submitted photographs—flat, blended coloration; streaking consistent with surface pigment movement; and reflective particles typical of cosmetic products—the observed color patterns are more consistent with topical cosmetic application than with color that develops beneath the skin. This observation does not address medical causation or any legal question.

II. General Characteristics of Post-Injection (Lip Filler / Lip-Flip) Appearance — November 4, 2023
(Educational and cosmetic context only)

Immediate and Short-Term Effects (0–48 hours)
• Swelling: Mild to moderate, generally smooth and uniform along the lip border; most noticeable near injection entry points.
• Tenderness: Lips may feel firm or tight; mild numbness/tingling can occur from topical anesthetics or lidocaine-based filler.
• Color Change: Small bluish or purplish marks can appear where the needle entered—typically round/oval, well-defined, and localized.
